

COMFORTCARE DIGITAL HEALTH & PHARMACY PLATFORM

PRODUCT REQUIREMENTS DOCUMENT

Version 1.0 • September 2026 • Nigeria

Product vision	A trusted digital pharmacy ecosystem connecting customers, ComfortCare branches, partner pharmacies, sales teams and last-mile logistics in one operational platform.
Core products	Customer Mobile App • POS • Partner Portal • Rider/Logistics App • Staff/Sales Portal • Admin Portal • Central Backend & Intelligence Layer
Primary market	Nigeria, with architecture designed for additional branches, partner pharmacies and cities.

This document is a product baseline. Clinical, regulatory, financial and commercial rules marked as configurable must be approved by ComfortCare before production.

1. Document Control

Item	Definition
Document	ComfortCare Digital Health & Pharmacy Platform — Product Requirements Document
Version	1.0
Status	Baseline / Discovery-to-Implementation
Owner	ComfortCare Pharmaceuticals Ltd.
Country	Nigeria
Currency	Nigerian Naira (₦)
Primary users	Customers, pharmacists, cashiers, partners, riders, sales staff, managers, finance and administrators

Approval gates

- Business: scope, commercial model, partner and branch operating rules.
- Clinical: medicine recommendation, prescription handling, escalation and health-data rules.
- Finance: payments, refunds, commissions and settlements.
- Operations: fulfilment, delivery, returns and exception handling.
- Technology: architecture, security, integrations and release strategy.

2. Executive Summary

ComfortCare is envisioned as a connected pharmacy commerce and digital health ecosystem rather than a single shopping application. The platform combines online ordering, physical POS operations, verified partner pharmacies, inventory, logistics, accounting, sales operations, staff reporting, conversational AI and personal health features.

The central backend is the system of record. Customer orders can be fulfilled by ComfortCare locations or approved partner pharmacies, then delivered through ComfortCare-managed logistics. The customer app provides e-commerce, order tracking, AI assistance and health records. Internal users operate through focused tools with role-based access.

3. Product Goals

Business goals

- Increase digital and physical sales through a unified commerce platform.
- Expand product availability through a verified partner-pharmacy network.
- Centralize order routing, fulfilment and last-mile delivery.
- Improve stock, financial and operational visibility.
- Generate measurable sales opportunities through AI and human sales agents.
- Build a scalable foundation for future health services.

Customer goals

- Find healthcare products quickly and understand key product information.
- Order securely with transparent pricing and delivery information.
- Track an order from placement to delivery.
- Get useful conversational assistance while preserving clinical safety.
- Maintain selected health records, medication reminders and measurements.

Success metrics

Area	KPIs
Commerce	Conversion, orders/day, average order value, repeat purchase, abandoned-cart recovery
Operations	Acceptance time, fulfilment time, stock accuracy, cancellation rate
Logistics	On-time delivery, average delivery time, failed delivery rate, delivery cost
Partners	Active partners, acceptance, fulfilment, sales, settlement accuracy
AI/Sales	Qualified leads, handoffs, assisted conversions, AI-to-order conversion
Staff	Attendance compliance, response time, sales per agent, productive hours

4. Product Scope & Platforms

Platform	Purpose
Customer Mobile App	E-commerce, AI assistant, health profile, orders, payments and tracking
POS	Physical pharmacy sales, payments, receipts, shifts and stock integration
Partner Portal	Onboarding, products, stock, orders, fulfilment, earnings and settlements
Rider App	Delivery offers, pickup, navigation, proof of delivery and earnings
Staff/Sales Portal	Leads, conversations, follow-ups, assisted sales and attendance
Admin Portal	Users, branches, partners, inventory, logistics, finance, AI, reports and settings
Central Backend	Authentication, business rules, order engine, stock, payment, finance, notifications and audit

Out of initial MVP / later phases

- Connected medical-device integrations.
- Telemedicine/video consultations.
- Advanced clinical decision support.
- Insurance/claims integrations.
- Subscription/chronic-care programs.
- Expansion outside Nigeria.

5. Users, Roles & RBAC

Role	Responsibilities	Access
Customer	Shop, pay, track, chat, manage own health information	Own account/data
Pharmacist	Prescription review, product guidance, escalation	Authorized orders/prescriptions
POS Cashier	Physical sales, payments, receipts, shifts	Assigned branch/POS
Branch Manager	Branch sales, staff and stock oversight	Assigned branch
Partner Admin	Partner profile, products, stock, orders, earnings	Own pharmacy
Rider	Pickup and delivery	Assigned jobs
Dispatcher	Assign and monitor deliveries	Logistics operations
Sales Agent	Leads, conversations, follow-ups, assisted orders	Assigned customers/leads

Role	Responsibilities	Access
Inventory Manager	Stock, batches, transfers, adjustments	Authorized locations
Finance Officer	Payments, settlements, reconciliation	Financial module
Operations Admin	Daily platform operations	Assigned modules
Main Admin	Configuration, permissions and oversight	Full administrative scope

RBAC must support granular view/create/update/approve/refund/export permissions. Sensitive actions require elevated permission and audit logging.

6. Customer Mobile App

6.1 Authentication & onboarding

- Phone/email registration, OTP verification, login, recovery and logout.
- Basic profile, delivery addresses and communication preferences.
- Optional health-profile onboarding with explicit consent.

6.2 Home & discovery

- Search, categories, promotions, recommendations, recent orders and AI shortcut.
- Location-aware availability where applicable.

6.3 E-commerce

- Product lists, filters, search, product detail, favourites and cart.
- Checkout, delivery address, delivery option, payment and order confirmation.
- Order history, reorder, cancellation where permitted and refund status.

6.4 Prescription workflow

- Upload prescription image/PDF where supported.
- Pharmacist review states: received, under review, clarification required, approved, rejected/expired.
- Restricted products cannot be released before required verification.

6.5 Payments

- Support approved Nigerian payment methods.
- Handle pending, successful, failed, reversed and refunded transactions.
- Final amount must clearly show products, discounts, delivery and total.

7. AI Conversational Assistant

The AI is simultaneously a customer-service assistant, product-discovery assistant, controlled health-information assistant and sales assistant. It must not become an unrestricted diagnostic or prescribing system.

Capabilities

- Natural-language product search and discovery.
- Ask clarifying questions before appropriate OTC recommendations.
- Explain approved product information, directions and warnings.
- Recommend available products when the use case is appropriate.
- Cross-sell/upsell only within approved commercial and safety rules.

- Answer order, payment and delivery questions using authorized live data.
- Detect buying intent, create leads and hand off to human sales agents.
- Route prescription questions to pharmacists.
- Recover abandoned carts and support approved campaigns.

Clinical safety boundaries

- Never claim to be a doctor/pharmacist or present uncertain output as a diagnosis.
- Do not independently prescribe prescription-only medicines.
- Configured red-flag symptoms require urgent safety guidance and escalation.
- Pregnancy, infants/children, severe allergic reactions, chest pain, severe breathing difficulty, stroke-like symptoms, poisoning/overdose and other configured high-risk cases require appropriate escalation.
- Recommendations must use an approved, versioned knowledge base.
- AI interactions and recommendations should be auditable subject to privacy rules.

Trigger	System action
User requests human	Offer sales agent or pharmacist handoff
Prescription question	Pharmacist queue
High-risk symptom	Safety response + configured escalation
Buying intent	Lead creation/checkout assistance
Low confidence	Clarify or hand off; do not guess

8. Personal Health & Monitoring

Initial scope should prioritize user-controlled records and reminders. The app must not imply that it replaces professional diagnosis or emergency care.

- Health profile and selected demographic information.
- Allergies and medication list.
- Medication reminders and adherence logging.
- Blood pressure, blood glucose, weight and configurable measurements.
- Measurement history and trends.
- Health notes and reminders.
- User-initiated sharing/export where supported.
- Future device integrations with explicit consent, data-quality rules and revocation.

9. POS

- Staff login, branch/terminal identification and shift start/end.
- Product lookup by name, SKU or barcode.
- Cart, customer lookup, prescription gate and approved discounts.
- Payment capture, receipt printing/digital receipt and transaction history.
- Returns/refunds with permission controls.
- Stock deduction after confirmed sale.
- End-of-shift cash reconciliation.

- Branch/cashier sales reports.
- Optional offline queue for carefully defined low-risk operations with reconciliation.

10. Partner Pharmacy Platform

- Partner registration, business information, verification and approval.
- Pharmacy profile, hours, service area and payment/bank details.
- Product catalogue onboarding and product mapping.
- Stock availability and pricing updates.
- Order acceptance/rejection with reason.
- Pick/pack/ready-for-pickup workflow.
- Partner sales, commissions, earnings and settlement statements.
- Support and performance reporting.

Partner tenant isolation is mandatory: a partner must never access another partner's customers, stock, orders or financial records.

11. Inventory & Stock

Entity	Required information
Product	Name, brand/generic, category, SKU, barcode, pack size, prescription flag, status
Batch	Batch number, manufacture/expiry dates, supplier, quantity, cost
Location	Branch, warehouse or partner pharmacy; shelf/bin if required
Movement	Receive, reserve, sell, release, transfer, adjust, damage, expire, return
Pricing	Cost, selling price, discount rules and approved partner pricing

Inventory must distinguish on-hand, reserved, available, damaged and expired stock. Expired products must never be available for sale. Batch/expiry-aware FEFO/FIFO rules should be configurable.

12. Order Management & Fulfilment

Recommended lifecycle

Cart → Checkout → Payment Pending/Confirmed → Order Placed → Routing → Accepted → Picking → Ready for Pickup → Rider Assigned → Picked Up → In Transit → Delivered. Exception states: Cancelled, Rejected, Failed Delivery, Returned and Refunded.

Routing rules

- Select fulfilment candidates using location, stock, partner status, hours and configured business priorities.
- Reserve stock before confirming fulfilment where required.
- Use fallback routing if the selected source cannot fulfil.
- Maintain an order-event timeline for support, audit and analytics.

13. Logistics & Rider App

Rider workflow

- Login → availability → delivery offer → accept/reject → navigate to pickup → verify pickup → picked up → navigate → customer verification → proof of delivery → completed.
- Failed delivery must require a standardized reason and invoke reattempt/return rules.
- Rider can view completed deliveries and earnings.

Dispatcher

- Unassigned queue, active deliveries, rider availability/workload and map/list view.
- Manual assignment/reassignment, SLA alerts, delivery zones/fees and exception management.

14. Sales Agent & CRM

- Lead inbox from AI, app enquiries and configured channels.
- Lead assignment and ownership.
- Customer/conversation timeline within permitted access.
- AI handoff with conversation summary.
- Follow-up tasks, reminders and contact outcomes.
- Assisted order creation.
- Commission attribution.
- Conversion, revenue and activity reporting.
- Abandoned-cart follow-up.

Sales attribution must distinguish AI-assisted, human-agent-assisted, organic, POS and partner-generated sales where possible.

15. Staff Attendance, Presence & Productivity

The platform should provide auditable attendance and presence records. Any seat/workstation presence tracking must follow applicable workplace and privacy requirements, with clear notice, defined purpose, restricted access and retention rules.

- Clock-in/out, breaks and availability status.
- Optional authorized workstation/session heartbeat.
- Presence event timeline.
- Late arrival, early departure, absence and working-hour calculations.
- Sales/task activity metrics.
- Manager review/correction workflow with audit trail.

Example event	Record
08:01	Clocked in
10:15	Break started
10:32	Returned
13:04	Break started
13:21	Returned
17:03	Clocked out

16. Accounting & Finance

- Sales revenue and payment transaction ledger.
- Refunds/reversals and delivery charges.
- Partner commissions and settlements.
- Rider and staff commissions/earnings.
- Purchases, supplier expenses, receivables/payables where required.
- Daily reconciliation and branch/partner statements.
- Exportable financial reports.

Illustrative settlement

Component	Example
Customer order	■15,000
ComfortCare commission	■1,500
Delivery fee	■1,000
Partner net earning	■12,500

Figures are illustrative only. Actual commissions, taxes, delivery fees and settlement rules require commercial/finance approval.

17. Admin Portal

- Executive dashboard: revenue, orders, customers, partners, fulfilment, delivery and alerts.
- User/role/permission management.
- Branches and locations.
- Partners and verification.
- Products, categories, pricing and promotions.
- Inventory and stock controls.
- Orders and logistics.
- Riders and sales staff.
- AI knowledge/configuration and health feature configuration.
- Finance, settlements and reconciliation.
- Notifications, audit logs and system settings.

18. Reporting & Analytics

Report family	Examples
Executive	Revenue, orders, AOV, active customers, fulfilment and delivery
Commerce	Product/category sales, conversion, repeat orders, abandoned carts
Inventory	Stock, valuation, low stock, expiry, movement and shrinkage
Partner	Acceptance, fulfilment, sales, commission and settlement
Logistics	Deliveries, SLA, rider utilization, failures and delivery cost
Sales	Leads, conversion, agent revenue, follow-ups and AI handoffs
Staff	Attendance, presence, hours, productivity and sales

Report family	Examples
Finance	Payments, refunds, commissions, settlements and expenses

KPI definitions must be centralized so dashboards and reports produce consistent numbers. Export and drill-down must be permission-controlled.

19. Notifications

- Order placed; payment success/failure; acceptance/rejection.
- Prescription status; ready for pickup; rider assigned; out for delivery; delivered.
- Failed delivery; refund; medication reminder.
- Sales follow-up reminder; partner settlement; stock/expiry alert.
- Channels: in-app, push, SMS and email as configured.
- Marketing communications require appropriate consent/preferences.

20. Non-Functional Requirements

Area	Requirement
Security	TLS, encryption where appropriate, secure secrets, least privilege, RBAC and session controls
Privacy	Consent, purpose limitation, restricted access, retention and user rights processes
Availability	High availability for customer ordering, POS and operational services; formal SLA to be defined
Performance	Fast search, checkout and POS; measurable latency targets to be defined technically
Scalability	Support growth in customers, products, branches, partners, orders and riders
Auditability	Traceable financial, inventory, prescription, permission and operational events
Observability	Central logs, metrics, traces, alerts and error monitoring
Accessibility	Readable typography, strong contrast and accessible touch/interaction patterns
Localization	Nigeria-first Naira, phone, address, time-zone and payment workflows
Backup	Automated backups, restore testing and recovery procedures

21. Core Data Entities

Entity	Purpose
User / Role / Permission	Identity and access control
Customer Profile	Commerce profile and preferences
Health Record	Measurements, medication and health notes
Product / Category	Master catalogue
Product Batch	Batch, expiry and cost tracking
Inventory Location / Movement	Stock location and every stock change
Partner / Branch	Pharmacy organizations and ComfortCare locations
Order / Order Item	Customer purchase and line items

Entity	Purpose
Prescription	Prescription document and review state
Payment	Payment transaction/provider reference
Delivery / Rider	Last-mile job and delivery personnel
Lead / Conversation	Sales opportunity and interaction history
Commission / Settlement	Earnings and partner financial settlement
Attendance Event	Clock, break and presence records
Notification / Audit Event	Communication and traceability

22. Critical End-to-End Workflows

A. Customer order

Customer discovers product → reviews → cart → checkout → payment → routing → fulfilment → picking → rider assignment → pickup → delivery → proof of delivery → completion → inventory and financial ledgers updated.

B. Partner fulfilment

Partner receives order → verifies stock → accepts → reserves → picks/packs → ready → rider pickup → inventory update → completion → partner earning becomes payable under configured settlement rules.

C. AI-to-human sales

Customer chats → AI assists → buying intent or escalation detected → lead/handoff → sales agent or pharmacist takes over → assisted order → attribution recorded.

D. POS sale

Cashier opens shift → scans → verifies prescription if required → discount → payment → receipt → stock deduction → transaction → shift reconciliation.

E. Failed delivery

Rider records standardized failure reason → system applies reattempt/return/refund rules → customer notified → operations resolves → inventory/payment/settlement updated.

23. Initial UI/UX Screen Inventory

Platform	Core screens/areas
Customer	Onboarding, Login/OTP, Home, Search, Categories, Product List/Detail, Cart, Checkout, Payment, Orders, Tracking, Prescription, AI Chat, Health
POS	Login, Shift Start, Sales, Product Search, Cart, Customer, Prescription, Discount, Payment, Receipt, Returns, Transactions, Shift Close, Reconcili
Partner	Onboarding, Verification, Dashboard, Profile, Products, Inventory, Orders, Fulfilment, Earnings, Commission, Settlements, Reports, Staff, Setting
Rider	Login, Availability, Delivery Queue, Delivery Detail, Navigation, Pickup, In Transit, Customer Delivery, Proof, Failed Delivery, Earnings, History, P
Sales/Staff	Dashboard, Leads, Lead Detail, Conversations, AI Handoff, Customers, Follow-ups, Assisted Order, Sales, Commission, Attendance, Presence,
Admin	Dashboard, Users, Roles, Branches, Partners, Products, Categories, Inventory, Orders, Logistics, Riders, Sales, AI, Health Config, Finance, Sett

24. Integrations

- Payment gateway(s) suitable for Nigerian commerce.

- SMS/OTP, email and push notification services.
- Maps/geocoding/navigation.
- Barcode/QR scanning.
- Secure cloud storage for prescription documents.
- Analytics, crash monitoring and observability.
- Optional accounting/ERP integrations.
- Optional health-device integrations in later phases.

Every integration must define timeout, retry, idempotency, failure and reconciliation behavior.

25. Security, Privacy & Audit

- Strong authentication and session management.
- API-level authorization and tenant isolation.
- Elevated controls for refunds, stock adjustments, price overrides, prescription decisions and settlements.
- Health information treated as sensitive data with explicit consent and restricted access.
- Prescription files protected with secure access controls and defined retention.
- Avoid storing sensitive payment credentials unnecessarily.
- Security monitoring, dependency updates and incident response.
- Audit logs for critical security, financial, inventory and clinical actions.

26. Recommended Delivery Phases

Phase	Scope
1 — Foundation	Identity, RBAC, products, branches, inventory foundation, order model, payments, admin
2 — Customer Commerce	Mobile catalogue, cart, checkout, orders, notifications and tracking
3 — POS	Branch POS, shifts, sales, receipts, stock integration and reconciliation
4 — Logistics	Rider app, dispatch, tracking, delivery proof and exceptions
5 — Partners	Partner onboarding, catalogue/stock, fulfilment and settlements
6 — Sales & Staff	CRM, AI handoff, sales performance, attendance/presence
7 — AI & Health	Controlled AI assistant, approved knowledge base, health records/reminders
8 — Advanced Analytics	Executive BI, forecasting and optimization

Recommended MVP principle: launch reliable commerce + inventory + payment + fulfilment before sophisticated AI and health automation. AI should be introduced with controlled knowledge, safety tests and human escalation.

27. High-Level Acceptance Criteria

- Verified customer can register, browse and place an order.
- Payment status is accurately reconciled with order state.
- System can route an order and track fulfilment source.
- Pharmacist can review prescription-required orders.
- Partner can receive and fulfil authorized orders.

- Rider can complete delivery with proof of delivery.
- Inventory movements are traceable from receipt through sale/return/adjustment.
- POS and online orders use consistent inventory and financial records.
- Sales agent can receive AI-generated lead and continue the conversation.
- Managers can view attendance/presence according to permission.
- Finance can reconcile payments and settlements.
- Administrators can manage roles and platform configuration.
- Critical actions produce audit events.
- Reports reconcile with transaction data.

28. Key Risks & Mitigations

Risk	Mitigation
Unsafe AI advice	Controlled knowledge, red-flag rules, pharmacist escalation, testing and monitoring
Incorrect inventory	Batch/location ledger, reservations, barcode workflows, counts and audit
Partner data leakage	Tenant isolation and least privilege
Payment mismatch	Provider webhooks, idempotency, ledger and reconciliation
Delivery failure	Standard exception states, reattempt/return rules and alerts
Staff privacy	Clear notice, purpose limitation, retention and restricted access
Scope creep	Phased roadmap and change control
Operational complexity	Central order state machine and explicit ownership of each status

29. Business Decisions Required

- Exact ComfortCare and partner commission model.
- Partner verification/licensing requirements.
- Prescription-required product categories and pharmacist review policy.
- Delivery pricing, zones, rider compensation and COD policy if applicable.
- Refund, cancellation and return rules.
- Payment providers and supported methods.
- Partner settlement schedule and payout rules.
- Sales-agent commission model.
- Staff presence technology, acceptable monitoring and retention.
- Health-data consent, sharing and retention.
- AI approved knowledge sources, clinical reviewer and escalation policy.
- Regulatory/legal requirements applicable to operations.
- MVP launch city, branches and initial partner count.
- Accounting/ERP integration requirements.

30. Product & UX Principles

- Healthcare trust first: professional, clear and transparent.
- Reduce friction in search, reorder and checkout.
- Never hide critical safety information.
- Separate clinical guidance from commercial persuasion.
- Show operational status clearly to the right user.
- Use consistent terminology across mobile, POS and admin.
- Design for Nigerian connectivity, addresses, payments and support realities.
- Make financial and inventory actions explainable and auditable.
- AI should be conversational but bounded.
- Accessibility and readability are requirements.

31. Next Product Artifacts

- Detailed role-permission matrix.
- Complete business rules and order-state specification.
- Data model / ERD and API contract.
- Screen-by-screen UI/UX design specification.
- Navigation maps for every application.
- Payment, commission and settlement specification.
- Inventory/batch/expiry specification.
- Logistics dispatch and SLA specification.
- AI prompt/knowledge/safety specification.
- Health-data and consent specification.
- Engineering backlog with acceptance criteria.
- QA/UAT test plan.

32. Conclusion

ComfortCare should be built as a connected pharmacy and healthcare commerce ecosystem. The reliable foundation is the order, inventory, payment, partner and logistics engine. Around that core sit the customer app, POS, partner network, rider operations, sales/staff management and administrative controls. AI and health features extend the platform into a more personalized relationship layer while remaining subject to clinical safety, privacy and regulatory controls.

This PRD is the baseline for product discovery, UI/UX design and engineering planning. Before production development, ComfortCare should approve the open commercial, clinical, operational, financial and regulatory decisions identified in this document.
